ABSTRACT

During fiscal year 1970, over 800 projects were approved by the Economic Development Administration (EDA) to help create employment opportunities for jobless and underemployed Americans. EDA activities included public works, business loans, technical assistance, and support for local and regional planning programs. Establishment of multi-state regional EDA headquarters has brought the programs closer to the people. Although decentralization is most advanced in the public works branch, the technical assistance and planning activities have been affected as well. (BH)

THE SECRETARY OF COMMERCE
Washington, D.C. 20230

December 28, 1970

Dear Sirs:

One of the missions of the U. S. Department of Commerce is to help foster industrial and commercial development in areas which have not kept pace with our national rate of growth.

Under the Public Works and Economic Development Act of 1965, the Commerce Department provides financial, technical and planning assistance at the State and local levels to enable communities to overcome severe problems of high unemployment and low family incomes.

This effort is implemented by the Economic Development Administration under Public Law 89-136.

Highlights of fiscal 1970:

. A total of 808 projects were approved to help create employment opportunities for jobless and underemployed Americans. These included:

.. $157,896,000 for 308 public works projects in 126 areas.

.. $ 49,360,000 for 40 business loans in 25 areas.

.. $ 14,670,000 for 216 new technical assistance and research projects in 75 areas.

.. $ 10,235,000 to support the planning programs of local communities, counties and multi-county development districts.

To share in the President's commitment to make the Federal Government as responsive as possible to State and local needs, EDA has initiated a decentralization program. This decentralization has resulted in the establishment of new multi-State regional headquarters to bring EDA programs closer to more people, and the delegation to these offices of increased authority for processing applications and monitoring projects.

I am pleased to offer you this report in detail of EDA's achievements and activities during fiscal 1970.

Sincerely yours,

Maurice H. Stans

Secretary of Commerce

The President of the Senate
The Speaker of the House of Representatives

On-the-job and other activities pictured in this report are the result of projects and programs made possible with assistance from the Economic Development Administration.

FOREWORD

THOMAS MACAULAY once said, "The smallest actual good is better than the most magnificent promises of impossibilities."

The Economic Development Administration deals with realities, which can be harsh and demanding, rather than promises, which can be elusive and just as impossible to fulfill.

All too often there is a large gap between that which exists and that which should exist . . . between the resources a community has and the resources a community needs.

This disparity is particularly prevalent in areas where unemployment is high and family incomes are low . . . where economic conditions erode the quality of life rather than enhance it.

Like life itself, the economy of an area is subject to constant change. It either grows stronger or it declines.

EDA was established in September 1965 to help stimulate industrial and commercial growth and create good, permanent jobs where they are most needed—in communities burdened with declining economies.

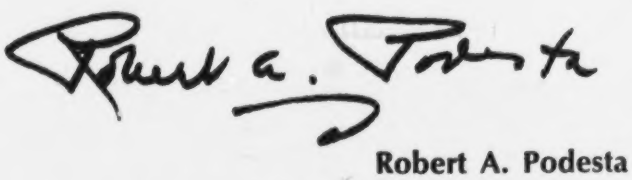
Distressed areas face staggering interlocking economic and social problems. Although pockets of severe poverty often are isolated from the main currents of the American economy, the effects of poverty are not isolated. They strain the entire fabric of our society.

In human terms and in economic terms, the American poor represent our greatest undeveloped market.

To help develop this market, EDA provides guidance and support in many ways . . . perhaps by making a loan to an expanding manufacturer . . . or preparing land for industrial use . . . or furnishing funds for municipal planning . . . or determining the best use of an area's resources . . . or constructing a vocational-training school.

Economic development cannot succeed without community initiative and participation . . . without a commitment by people at the local level to use change as a tool for betterment rather than to allow change to continue uncharted.

In the final analysis, the community itself must determine, first, whether it shall grow, and second, how it shall grow. EDA is on hand to help.



Robert A. Podesta
Assistant Secretary of Commerce
for Economic Development

CHAPTER ONE

Moving EDA Programs to the People

THE PROGRAMS of the Economic Development Administration are linked to community initiative.

EDA has taken several major steps to respond more effectively to local and State development programs by transferring as much authority as possible from Washington, D. C., to the agency's field offices.

This decentralization—involving places as well as programs and people—went forward during fiscal 1970.

Three routes are being taken:

1. More authority for processing applications and monitoring projects has been placed in the field.

2. EDA's Washington work force has been reduced while manpower in the field has been strengthened.

3. One new multi-State regional headquarters was put into operation in accordance with the President's commitment to establish common regional centers for agencies in the Executive Branch. Another office was scheduled to open in August 1970.

Programs affected by decentralization are public works, technical assistance, and planning aid for multi-county economic development districts and other local development organizations. To date, decentralization is most advanced in the public works branch of EDA.

PUBLIC WORKS

EDA regional directors have the authority to process public works applications for financial assistance, select on a priority basis those applications most worthy of final approval in Washington, and monitor the construction of projects.

Regional offices evaluate the economic impact of proposed projects, their feasibility and related legal requirements. They also determine the degree of local commitment to a proposed project. When area leaders

2/3

and residents support a proposal, and the proposed project appears sound from both a mechanical and economic viewpoint, the regional office conducts a pre-application conference.

This meeting involves community officials such as the mayor, the city attorney, and the city engineer. The conference deals with the basic question, "Will the proposed project stimulate economic development in the community?"

After accepting an application, the regional office prepares the complete project "package." EDA Washington then reviews the application to make sure that appropriate financial and engineering standards have been applied and that the proposed project complies fully with EDA policy.

One indication of the success of the pre-application conference format is that about 90 percent of the public works applications accepted for processing in the field are approved by the Assistant Secretary of Commerce for Economic Development.

TECHNICAL ASSISTANCE

The technical assistance program has been managed for the most part from Washington. This included the processing of applications, the approval of funds, and the monitoring of projects.

Many technical assistance projects still warrant this treatment because they have a nationwide impact or a range that involves more than one region.

However, technical assistance projects that are local in scope are monitored by the appropriate regional office. Applications for local technical assistance projects also are processed initially in the field.

PLANNING

EDA's planning program is closely linked to the agency's economic development district program. Much of the responsibility for the management of the multi-county district program has been assigned to EDA's regional offices.

This includes authority (1) to help local leaders and residents organize a new district, (2) to prepare planning-grant applications and offers, and (3) to evaluate Overall Economic Development Programs (OEDP's) prepared by multi-county districts and redevelopment areas receiving EDA planning support.

All of these functions previously had been the responsibility of EDA's district organization staff in Washington.

EQUAL OPPORTUNITY

During fiscal 1970, decentralization was one of the most important methods used by EDA to assure that minority Americans receive equal opportunity in competing for new jobs and enjoying the benefits of projects financed with support from the agency.

The field strength of EDA's Office of Equal Opportunity was increased to provide a closer and more responsive relationship with communities and employers in planning employment objectives. These field equal opportunity specialists were given in-house training by EDA Washington.

The agency took several steps to upgrade compliance procedures. These actions included (a) outlining operational procedures for EDA's regional offices, (b) providing for equal opportunity reviews of all applications for EDA assistance, and (c) requiring examination of public works projects to insure that minority neighborhoods are not discriminatorily excluded. A comprehensive manual for conducting compliance reviews also was published. EDA also put to use research and experience gained by other Federal agencies in the field of equal opportunity.

In addition, EDA initiated a program of recruiting minority college graduates for employment within the agency. The Office of Equal Opportunity also serves as liaison with the Department of Commerce personnel office in the development of job opportunity policies within EDA.

NEW REGIONAL OFFICES

When President Nixon signed the Reorganization Act of 1969, he announced that the Federal Government would set a "goal of uniform boundaries and field office locations for all social or economic programs re-

quiring interagency or intergovernmental coordination."

Since EDA was established in September 1965, it has had a close working relationship with many other Federal agencies, including the Department of Health, Education, and Welfare, the Department of Agriculture, the Department of Housing and Urban Development, the Department of the Interior, the Department of Labor, and the Office of Economic Opportunity (OEO).

In line with the President's commitment to move field staffs to common regional centers, EDA:

- Opened an Atlantic Regional Office in Philadelphia to serve 11 Mid-Atlantic and New England States, the District of Columbia, Puerto Rico, and the Virgin Islands. The new office is the result of the consolidation of area offices at Portland, Maine, and Wilkes-Barre, Pennsylvania.

- Authorized the transfer of the regional office at Duluth, Minnesota, to Chicago. The new Midwestern Regional Office was to open in August 1970. It serves 10 States in the Midwest and on the Great Plains.

EDA's other field headquarters offices are located in Seattle, Washington; Huntsville. Alabama; Austin, Texas; and Huntington, West Virginia.

EDA recognizes that a higher level of performance in the Federal Government also will improve the effectiveness of State and local governments. Decentralization is a vital part of this higher level of performance.

CHAPTER TWO

Evaluation of EDA Programs

AT THE request of President Nixon through the Office of Management and Budget, the Economic Development Administration initiated a comprehensive evaluation of its overall program during fiscal 1970.

EDA staff members, as well as several private consulting firms, were used.

The results of these evaluations were as follows:

PUBLIC WORKS

A total of 274 public works projects that had been completed for at least 1 year were evaluated.

These projects generated the equivalent of 33,486 industrial, commercial, and supporting jobs at an average annual salary of $6,500. The total EDA public works investment in these projects was $76,684,000. EDA cost per job averaged $2,290. Total cost of the 274 projects was $125,426,000, the balance of the funds being local, State, and other Federal moneys. EDA's share of this cost was about 61 percent.

The flow of private investment also was studied in 93 of the 274 projects. Findings show that these projects paved the way for the location of new firms and generated private investment of $8.55 for each EDA public works dollar.

EDA also conducted a separate survey of 155 industrial parks developed with EDA public works funds. These sites are occupied by 360 companies employing 34,525 persons. EDA's investments in these parks totaled $49,505,000. The average cost per job was $1,434.

BUSINESS LOANS

Fifty-two business loan projects approved prior to fiscal year 1970 were analyzed. For firms established or expanded with the aid of an EDA loan, the findings indicate that the agency's cost per job (direct and indirect) averaged $1,248.

Extensive case studies were made of 10 of the 52 projects. It was determined that in 5 of these 10 projects, other new firms also were attracted to the areas involved.

These other companies established operations either as suppliers of the EDA-assisted firms or because they were encouraged by the success of these firms.

In another study the consulting firm concluded that if 100 jobs are generated through an EDA business loan, about 40 will be filled by persons who previously were (a) unemployed, (b) farm laborers, (c) part-time workers, or (d) people who had not been members of the labor force.

TECHNICAL ASSISTANCE

During fiscal 1970, an evaluation of 134 technical assistance projects was begun.

They included:

- All rural projects in Georgia and California.
- All projects in Philadelphia and Cleveland.
- Five university centers operating business development programs in distressed areas.
- Thirty-four other projects distributed throughout the country.

The sample was structured to provide a representative range of technical assistance activities from the standpoint of geographic location and project type.

The diversity of EDA's technical assistance program prevented completion of the study before the close of the fiscal year. By that time, however, the evaluation of 34 of the 134 projects had been completed.

Based on the findings of these 34 projects, EDA technical assistance has (a) helped initiate a broad range of business activity in distressed areas, (b) provided coordination between communities in need of aid and organizations that can furnish various forms of support and training, (c) involved communities in economic development activity, and (d) helped establish and strengthen local and national development organizations as sources of technical and management assistance.

Community leaders participating in these projects generally were optimistic over the prospects of future growth and became more active in planning and implementing economic development programs.

PLANNING GRANTS

Twenty-six development programs in operation with EDA planning grants were evaluated.

The conclusions were: (1) the impact of a planning grant on economic development generally has been high; (2) the planning-grant program has provided staff expertise which, for the most part, had been nonexistent; (3) a successful development program depends primarily on active participation by local government, business, and civic leaders; and (4) planning grants increase coordination and cooperation between local jurisdictions served.

OTHER CASE STUDIES

To judge EDA's overall impact in particular places, a series of case studies was initiated. These studies assessed the interaction between projects and identified reasons for success or failure.

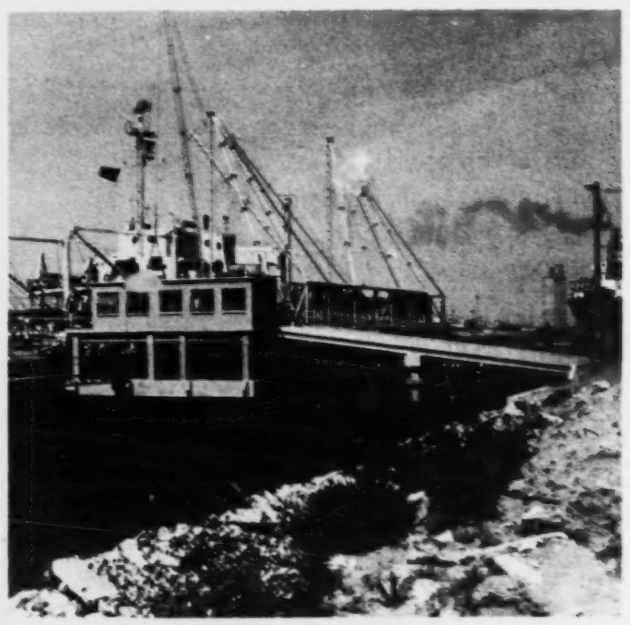
Case studies were conducted in 28 areas. Development districts, redevelopment areas, Indian reservations, and cities were included. Planning consultants and an EDA task force participated in these investigations.

The evaluators concluded that EDA programs effectively stimulate economic development in rural areas, thus providing reasonable alternatives to unemployed and underemployed residents who might otherwise migrate to central city areas.

In the view of one rural mayor, EDA has proved to be "the most helpful, resourceful program ever seen in our community with a maximum amount of doing and a minimum amount of talking."

And a district leader said, "If it weren't for EDA, there wouldn't be a darned thing here."

The comments were typical of many offered on the impact of EDA activity.



CHAPTER THREE

Areas Qualified for Assistance

TABLE 1. POPULATION OF QUALIFIED AREAS By Designation Criteria

Public Works and Economic Development Act
June 30, 1969—July 1, 1969
June 30, 1970—July 1, 1970

Basis of Qualification [1]	June 30, 1969		July 1, 1969*		June 30, 1970		July 1, 1970*	
	No. of Areas	Pop. (000)	No. of Areas	Pop. (000)	No. of Areas	Pop. (000)	No. of Areas	Pop. (000)

Title I								
102(a) Substantial unemployment .	63	3,480.3	33	2,836.2	36	3,100.0	29	2,640.1
Title IV								
401(a) 1 Persistent unemployment .	491	13,821.7	477	9,837.9	523	10,987.5	520	10,639.4
401(a) 1 Population loss ..	106	1,730.3	106	1,730.3	106	1,730.3	106	1,730.3
401(a) 2 Median family income .	172	4,643.4	172	4,643.4	172	4,643.4	172	4,643.4
401(a) 3 Indian reservations [2] ..	89	300.2	89	300.2	106	300.2	106	300.2
401(a) 4 Sudden rise in unemployment .	31	2,100.0	21	1,840.3	28	2,130.3	30	2,400.6
401(d) One redevelopment area per State ..	12	1,974.4	12	1,974.4	12	1,947.4	12	1,947.4

[1] Areas qualifying under two or more criteria are classified under the category that qualifies them for maximum benefits under the Act.
[2] Population shown here includes Indians in all qualified reservation areas. This results in minor duplication as some of the reservations are located within, or partly within, other qualified areas.
* Reflects changes following review at end of fiscal year.

EFFECTIVE July 1, 1970, a total of 975 areas were qualified for Economic Development Administration programs designed to generate new jobs through industrial and commercial growth.

Qualification generally is based on persistently high unemployment rates as reported by the Department of Labor, median family incomes not higher than 40 percent of the national median, low family income combined with high out-migration.

A total of 946 of these areas were qualified for public works grants and loans and business development loans from EDA. The remaining 29 areas were eligible only for public works grants. These areas were qualified because each had an unemployment rate of at least 6 percent for calendar 1969. EDA's other major program—technical assistance—may be put to use in any area of the Nation where there is a substantial economic need.

Of the total 975 areas, 579 qualified on the basis of high unemployment, 278 because of low family income and/or high out-migration; 106 are Indian reservations, and the remaining 12 qualified because of the legal requirement that each State shall have at least one redevelopment area.

Areas eligible for EDA assistance usually consist of individual counties. However, many of the communities eligible in New England are labor areas, which may involve only part of a single county or more than one county. Few major cities have an overall unemployment rate high enough for qualification.

Qualification also may be based on a "sudden rise" in unemployment caused by the closing or curtailment of activities at a major source of employment.

In fiscal 1970, Congress authorized the designation of special impact areas—urban and rural—to enable EDA to participate with other Federal agencies in programs to relieve depressed economic and social conditions in areas with heavy concentrations of low-income persons. Special impact areas are not required to have geographic or political boundaries.

The count of eligible areas for fiscal 1971 originally was determined to be 894, according to criteria of the Public Works and Economic Development Act.

The eligibility of 81 other areas was scheduled to be terminated on June 30, 1970, on the basis of employment statistics for calendar 1969. However, the Congress approved an amendment to the Act requiring that these 81 areas remain qualified through June 30, 1971, pending a possible revision in the method of determining eligibility.

As of July 1, 1970 (start of fiscal 1971):

- The only major cities qualified were Newark, Oakland, Cleveland, Washington, Providence, and Seattle.
- Parts of four cities were eligible: the Brooklyn Navy Yard area of New York City, the stockyards areas of Chicago and Omaha, and south-central Los Angeles.
- A total of 106 Indian reservations were qualified.
- Georgia had the highest number of qualified counties with 71. Kentucky was second with 66, Mississippi third with 60.

Economic development centers (growth centers) designated as part of the district program are eligible for assistance but not included in the area eligibility statistics.

CHAPTER FOUR

The Development District: Cooperation for Progress

12

EDA's economic development district program is giving a growing number of rural Americans the opportunity to remain in their home areas and build a better life for their families.

A development district is an organization of adjacent counties working together to combine their resources and coordinate their activities to overcome common economic and social problems.

A district contains at least two economically distressed areas—usually counties—that have been designated as eligible for EDA's full range of programs. These eligible counties are called redevelopment areas.

In addition, a district includes at least one growth center, also eligible for the full range of EDA assistance, which has a maximum population of 250,000. This center has the stability and potential to serve as focal point for development efforts in the district.

Strengthening a growth center through systematic, long-range economic development provides additional jobs and services for residents of surrounding counties.

Each district organization is composed entirely of local leaders and residents. It is nonprofit and nonpartisan. It includes city and county officials; business, industrial, labor, health, and educational leaders; and citizens representing the jobless, the underemployed, and the minorities.

EDA planning grants enable a district organization to employ a professional staff and to pay for related administrative expenses. Besides helping local leaders develop plans for economic and social growth, this staff provides the coordination necessary for effective use of programs offered at the State and Federal levels.

A district organization and its professional staff must prepare an Overall Economic Development Program (OEDP), which analyzes the problems and potentials of the district, and on the basis of its findings outlines goals and a strategy for attaining these goals. When the OEDP is approved by EDA, the district is formally designated. A district is eligible for EDA planning funds both before and after designation.

Designation makes (1) growth centers in nonqualified counties eligible for the full range of EDA programs and (2) redevelopment areas eligible for 10-percent bonus grants for EDA public works projects.

Comprehensive planning also is conducted by the growth center, which prepares and implements a Positive Action Program to help assure that its projects produce the maximum impact in a district. This helps stem the migration of the jobless and underemployed out of the district.

The growth center's Positive Action Program must be consistent with the goals and planning of the district's Overall Economic Development Program.

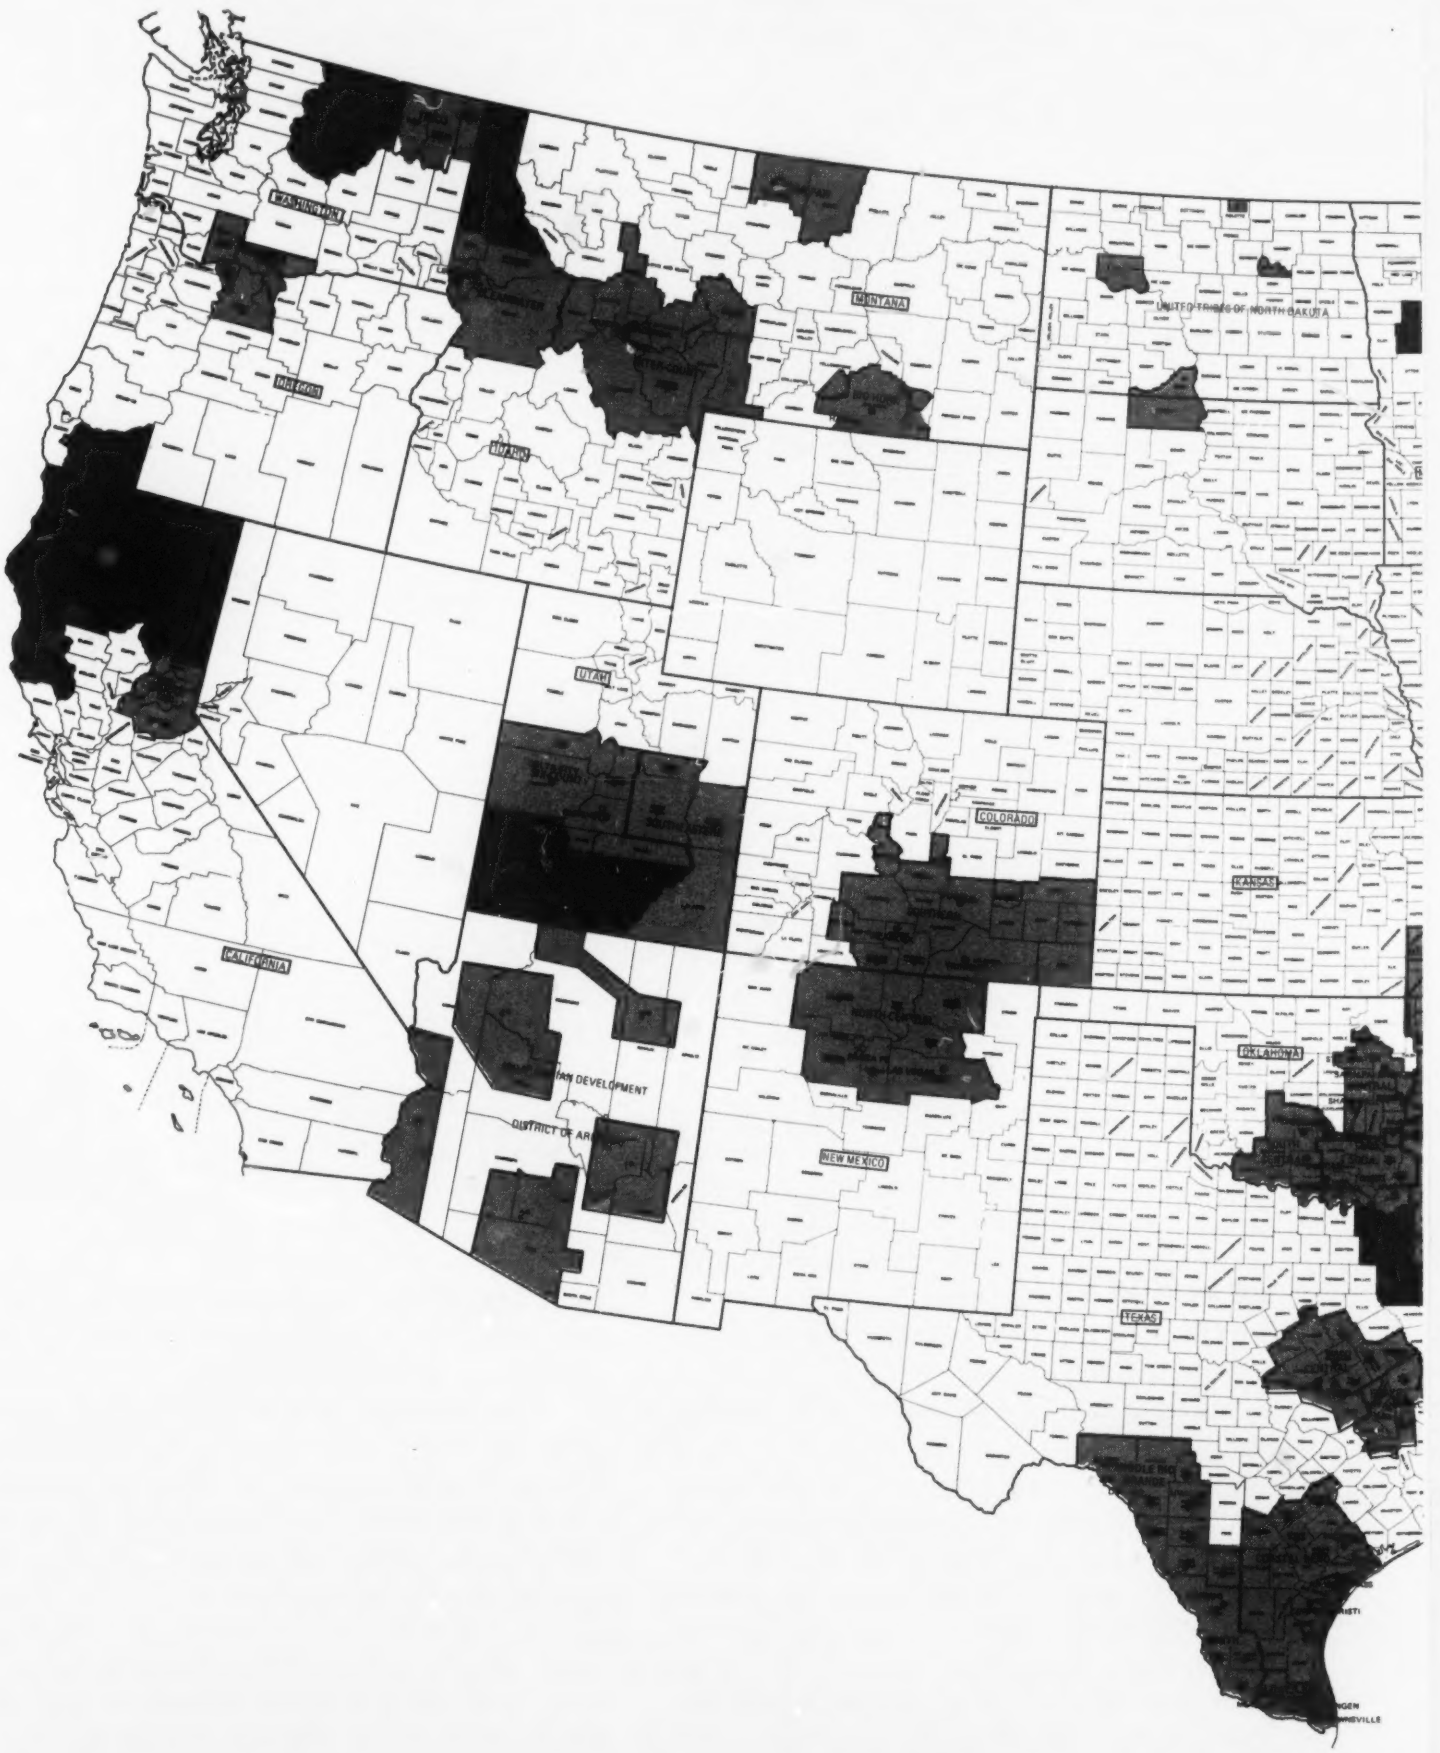
THE DISTRICT PROGRAM

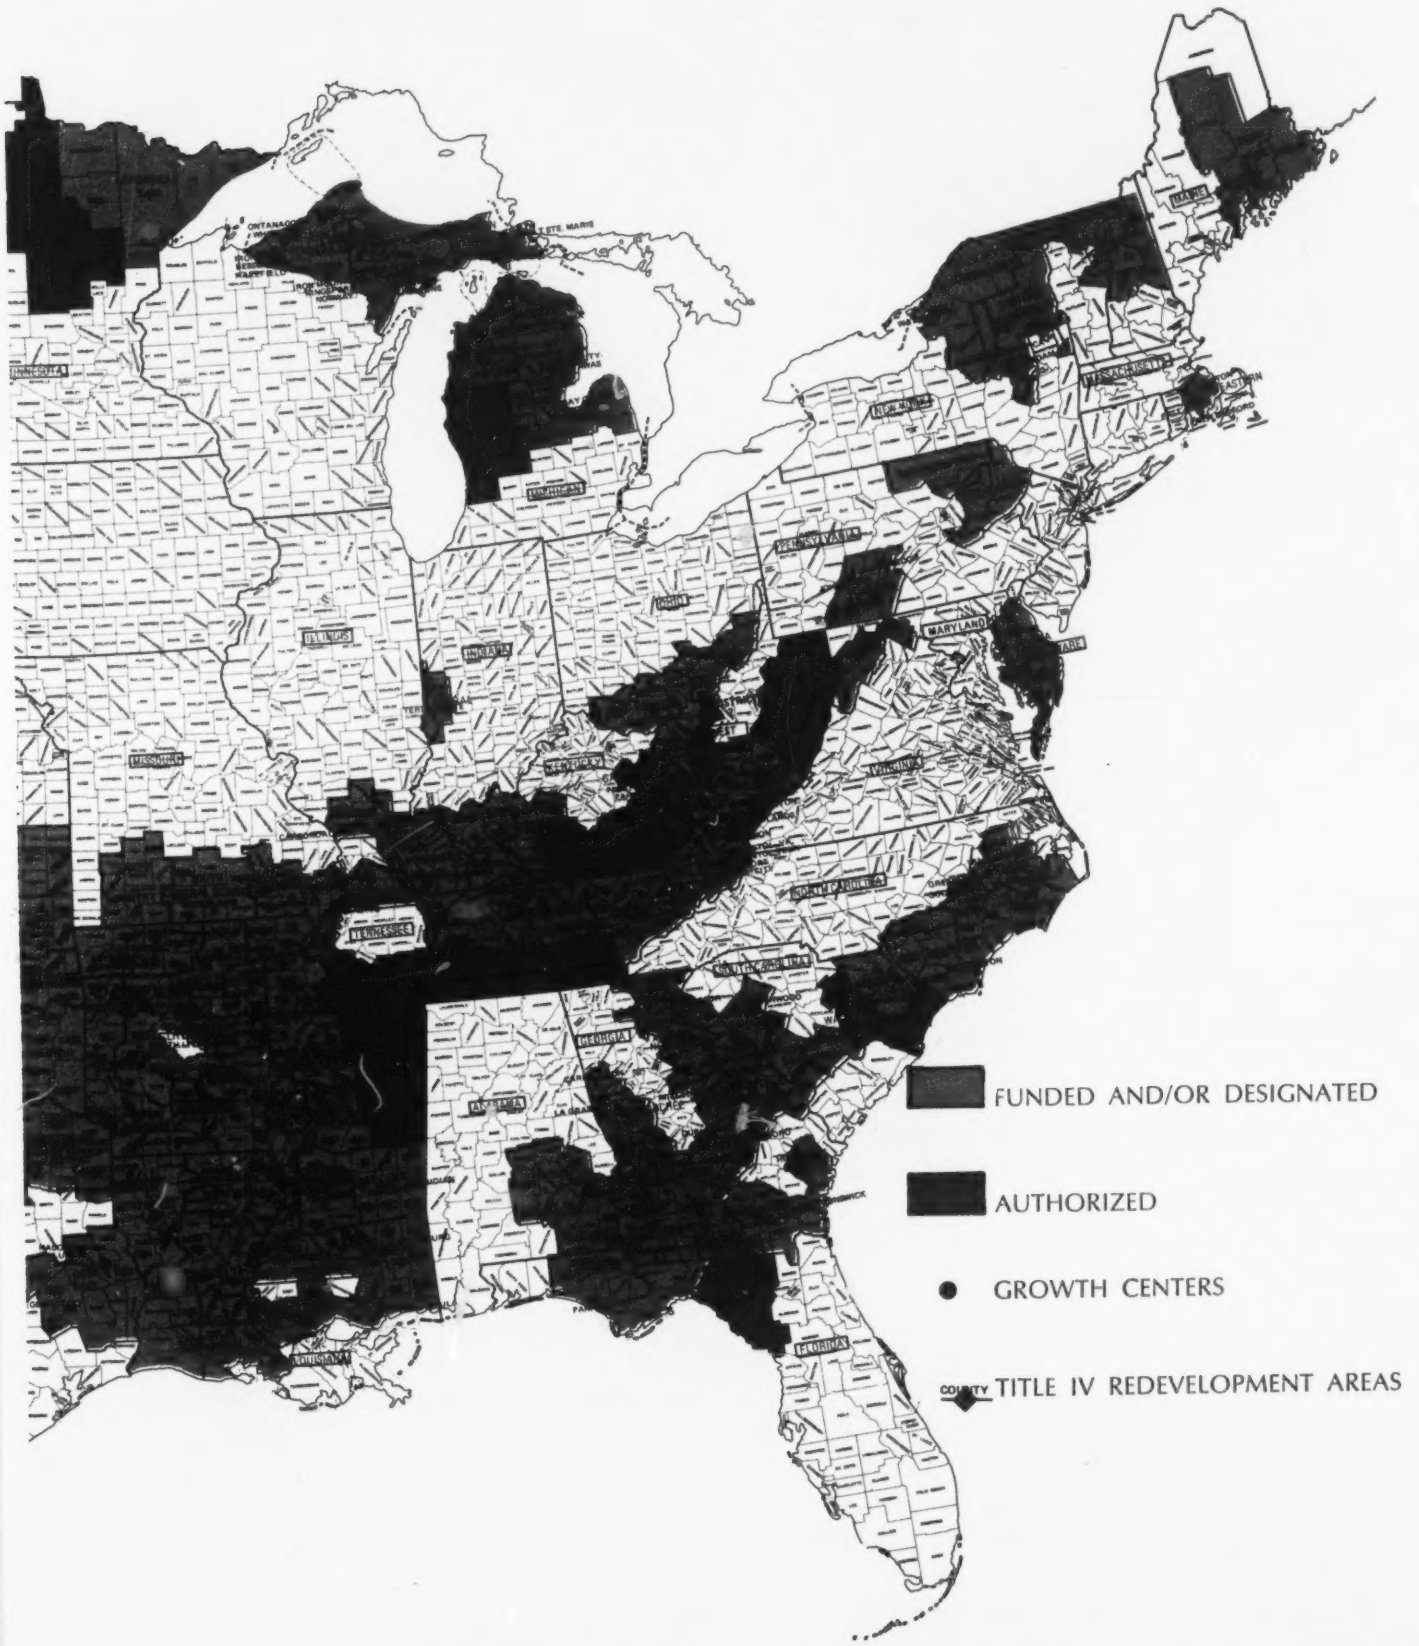
EDA's development district program got under way in 1966 and has been expanded each year since that time. By the close of the fiscal year, district organizations represented 861 counties or 27 percent of the 3,135 counties in the United States.

This program has been recognized as an ideal vehicle for multi-county development by other Federal agencies and an increasing number of States. The boundaries of each district are determined by the State, which also provides other types of support.

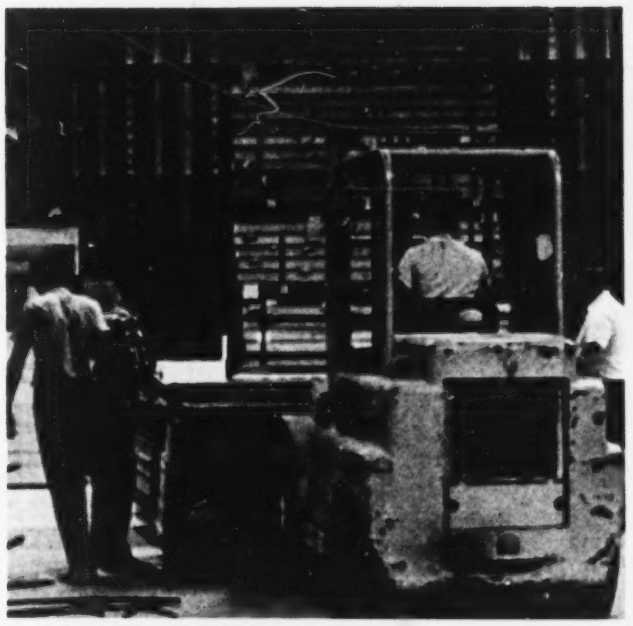
By the end of fiscal 1970, State Governors had selected 54 EDA-assisted development districts as regional clearinghouses. In this capacity, these districts review all Federal projects within their boundaries that have an areawide impact.

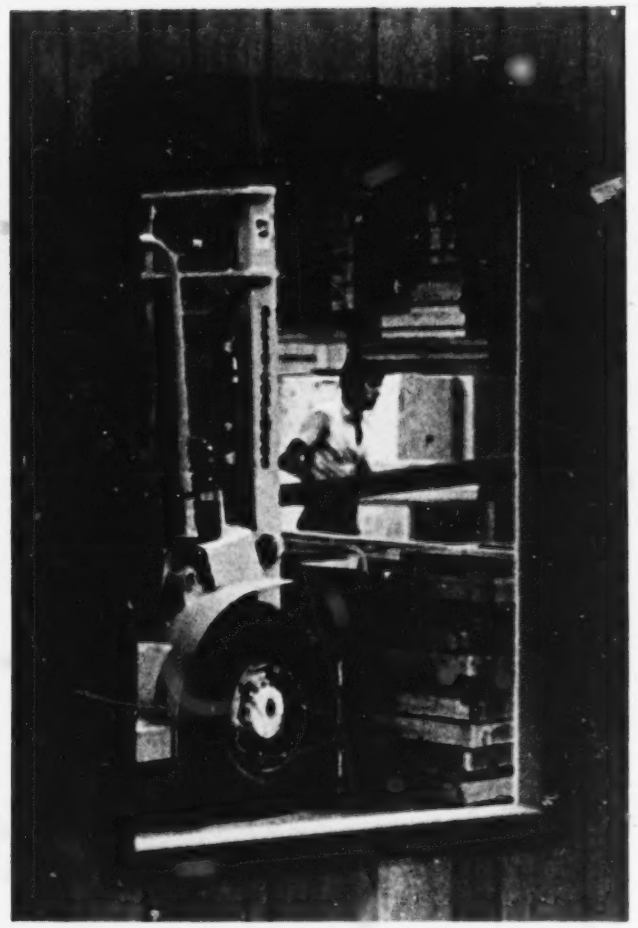
ECONOMIC DEVELOPMENT DISTRICTS JUNE 30, 1970





FUNDED AND/OR DESIGNATED
AUTHORIZED
GROWTH CENTERS
TITLE IV REDEVELOPMENT AREAS





Many districts now are receiving planning funds from other sources. These include the States, the Department of Housing and Urban Development, the Department of Health, Education, and Welfare, the Department of Justice, the Regional Commissions, the Farmers Home Administration, the Office of Economic Opportunity, and others.

In fiscal 1970, EDA provided $4,759,957 in planning assistance to the districts. Other agencies provided a total of $6,188,000.

EDA has continued to strengthen its support of specific job-generating projects within the districts. This trend is shown clearly by the agency's commitment to the development of growth centers.

During fiscal 1970, EDA invested $41,905,000 in public works funds and business development loans for growth center projects. The agency had approved $36,174,000 for the same types of projects during the previous fiscal year.

Fiscal 1970 marked the first time EDA was given the opportunity to participate in the federally sponsored Public Service Career Program on the district level.

A total of $4,715,000 was approved by EDA to train 2,610 disadvantaged persons for non-Federal public service careers across the Nation. The funds went to 38 districts to plan and coordinate (1) the job placement and training of 1,980 unemployed and underemployed persons, and (2) the advanced training of 630 persons now working in public institutions.

The grant money had been transferred to EDA from the Department of Labor under provisions of the Manpower Development and Training Act and the Economic Opportunity Act.

The economic development district program has proved to be an efficient delivery system for public and private development efforts . . . a delivery system that is functioning well because of local control and the knowledge that severe economic and social problems can be overcome when communities work together for the common good.

Hurricane Camille

SOUTHERN MISSISSIPPI DISTRICT MEETS DEVASTATING CHALLENGE

THE SOUTHERN MISSISSIPPI Economic Development District (SMEDD) had been in operation for more than 2 years on August 17, 1969, when "the greatest storm of any kind"—Hurricane Camille—swept the gulf coast and presented a major challenge to the district organization.

Prior to the storm, the district directors were concentrating on long-range plans for economic growth in a 10-county area. The hurricane demanded immediate decisions for rescue and rehabilitation activities.

The most severe storm damage had been felt in counties to the south and outside the district boundaries. But SMEDD technical personnel were among the first on the scene and the first to offer expert assistance.

Mayor Danny Guice of Biloxi viewed the scene in the wake of the storm:

"Two-hundred-mile-an-hour winds killed 248 persons and caused damage estimated at more than $1 billion. The economy of much of the Mississippi coast was destroyed. Immediate relief was essential. So, too, was long-term redevelopment. EDA was a natural for this effort."

Before a State emergency council was created, SMEDD officials and the EDA representative for Mississippi were providing assistance in the rescue effort.

EDA awarded a grant of $495,000 to establish the emergency council and another $89,000 to the Mississippi State Research and Development Center to assist in the economic recovery of the area.

For 2½ months, the whole focus of the SMEDD staff was on this aid effort. The staff devoted more than 2,000 man-hours to the paralyzed coast.

With successful recovery from the storm's effects now in sight, District President J. O. Cagle declared, "We have been, I believe, the one unifying organization operating in the Camille area. Indeed, ours is the only organization that has lent its full support and resources to the overall recovery effort."

As the pace toward recovery accelerated, the two counties which suffered the greatest damage—Harrison and Hancock—

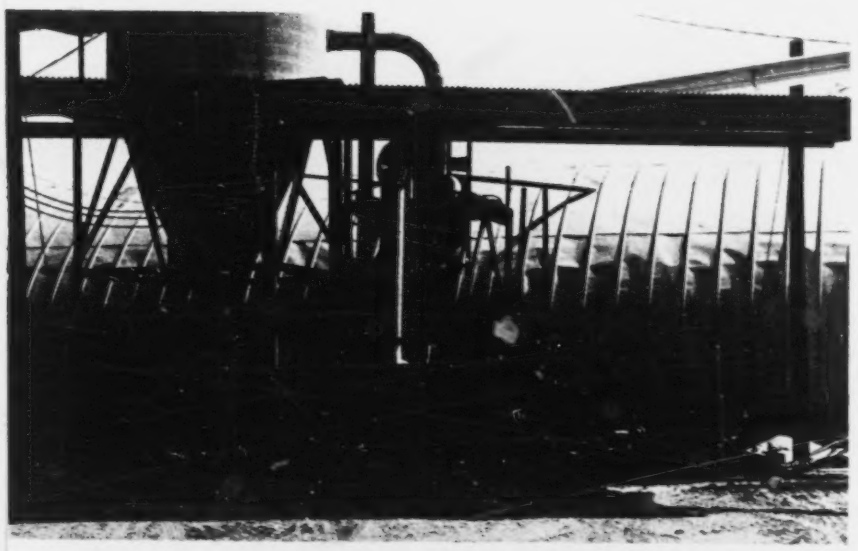
and three others adjacent to them—Jackson, Pearl River, and Stone—sought affiliation with SMEDD to coordinate the economic growth of the entire area.

With approval of EDA, the Southern Mississippi Economic Development District became a 15-county unit blanketing the entire southeastern "bootheel" of the State.

Other counties in the district are Covington, Forrest, George, Greene, Jefferson Davis, Jones, Lamar, Marion, Perry, and Wayne.

All except Forrest and Jackson qualify for financial assistance from the Economic Development Administration because of high rates of substantial and persistent unemployment or because of population loss and low median family incomes.

Historically, the counties' economy had rested upon cotton production, livestock, and timber harvesting. In recent years, however, automation has greatly reduced the manpower required for cotton harvesting, and Camille destroyed nearly 80 percent of the timber growth in the area. Moreover, the conversion from agricultural to industrial activities in the counties had been retarded by



a lack of sewer and water facilities, which discouraged new industries from locating in the sector.

In June 1966, when SMEDD was authorized by EDA, an estimated 24-percent nonwhite population of the area—primarily black with some Choctaw Indians—and another 16 percent of the white population were living on incomes below the national poverty guidelines.

EDA awarded funds to organize the district in February 1967, and it was designated as eligible to participate in the Federal program in June 1967.

By the end of fiscal 1970, EDA had approved planning grants, 2 business loans, and 16 public works projects totaling more than $21 million for the member counties.

The district reported that more than 600 new jobs had been created as a result of the EDA projects. More than 4,000 other new jobs were expected to result from projects approved but not yet completed, the district stated.

All told, slightly more than $17 million of EDA's grants and loans for the district came as a result of Camille.

A. L. Johnson of Prentiss, a district director, sees the work in the counties in this light:

"EDA's chief contribution, perhaps, has been in helping to restore the confidence of the people of the area. And the main vehicle for this activity was the Southern Mississippi Economic Development District. Conceived in a time and place of high tension, the district almost died in infancy. When it survived its first year, however, there was a ray of hope where before there had been only dark fear."

The out-migration of population from the member counties—which soared to nearly 17 percent between 1950 and 1960—has been stemmed, according to Robert Hynson, board member from Jones County.

Governing the district is a board of directors composed of one representative from each county plus six "at large" representatives of the black population.

Among the first EDA-funded projects to be completed in the district was an $18,000 waste-treatment facility at the Sophia Sutton Mission, a Baptist-operated school for Negro children in the heart of Jefferson Davis County.

Another $242,000 grant was made by EDA for the installation of water and sewer lines to a projected industrial park in Ellisville, Jones County, and a similar grant, of

$1,199,000, was made for Hattiesburg, a designated growth center of the district.

A $501,000 business loan was made to Howard Industries, Inc., in October 1968 for construction of a plant to manufacture pole-borne transformers at Laurel, Jones County. The plant has been constructed and now employs about 100 persons, a staff to be increased to about 300 by the end of the third full year of operation—all new jobs created as a result of the EDA loan.

The town of Richton in Perry County was able to retain one industry and has attracted others as a result of an EDA public works grant of $230,000 to extend water and sewer services. Richton requested the assistance after an inadequate water system prevented firemen from controlling a blaze that caused extensive damage to the Perry Timber Company, a producer of pine studs, flooring blocks, and creosoted poles. The company decided to close its mill in Richton until adequate fire protection was assured.

With the new water and sewer facilities, the timber mill not only remained, but has plans for enlarging its operations. Thirty-eight men are employed at the mill, and another 300 jobs are filled in lumbering activities to provide wood for the mill.

The EDA impact, however, is much broader. The St. Regis Paper Company has established a small wood-chipping facility, giving direct or directly related employment to between 45 and 55 persons. New small businesses have begun to appear in the area, including a drive-in on the outskirts of town. The local hospital is expected to expand, not only improving its service to the area, but offering new employment opportunities to about 35 persons.

The district has had an effect in other ways. Dr. C. E. Smith, president of the Forrest County branch of the National Association for the Advancement of Colored People, says it "has done much to improve the dialogue between the black and white leadership of the district."

SMEDD's staff is interracial, and evidence of its interest in participating in minority-oriented activities can be seen from its role in organizing a low-income Federal Credit Union and an Urban League, and

assisting in acquiring a low-rent housing project, said Dr. Smith.

Throughout the district, there are plans for new vocational and technical training schools and additional new industrial parks.

George Howell of Pascagoula, vice president of Litton Industries, which operates the Ingalls Shipyards in the city, thinks the overall attitude of the area is one of optimism.

The trend is toward growth. Today the problems of the Southern Mississippi Economic Development District are examined as challenges rather than insurmountable obstacles.

CHAPTER FIVE

Public Facilities: Foundation for Growth

TYPICAL EDA public works projects include the development of industrial parks; the construction of vocational-training schools; the expansion of airport and harbor facilities; the installation of water and sewer systems; the construction of sewage-treatment plants, dams, and roads; and the development of tourism and recreation areas.

During fiscal 1970, EDA's Office of Public Works approved $157,896,000 in grants and loans for 308 projects in communities throughout the United States and Puerto Rico.

A total of $146,633,000 was approved in direct and supplemental grants. The remaining $11,263,000 was in long-term, low-interest loans.

An additional $305,308,000 was provided for these projects by local, State, and other Federal agencies, making the total cost $463,204,000.

As of June 30, 1970, EDA had approved a cumulative total of $919,008,000 for public works and development facilities. The overall cost of the projects was $1,780,895,000, with $861,887,000 coming from other sources.

EDA continued its strong support of public works projects in growth centers serving rural multi-county economic development districts. A total of $27,520,000 was approved for growth center projects.

Mountainous Virginia County Scales Peaks of Economic Growth

SMYTH COUNTY, the site of Virginia's highest mountains, set its sights high for industrial development, and the result is hundreds of new jobs and a rapidly growing economy.

The county is situated in the beautiful Allegheny Mountains in the southwestern corner of Virginia. The State's two highest peaks—Mount Rogers (5,719 feet) and Whitetop Mountain (5,520 feet)—are located on Smyth's common boundary with Grayson County.

Among Smyth County's assets are numerous scenic attractions for tourists, including Hungry Mother State Park, 4 miles north of Marion, the county seat. The park entertains more than 250,000 visitors in the summer months.

But in recent years the county has been affected by the technological revolution in agriculture that has eliminated many farm jobs throughout the country. From 1950 to 1960, agricultural employment in the county dropped from 2,049 to 1,190. This 42-percent decline was followed by a further 12-percent drop to 1,050 farm jobs by March 1964.

By July 1966, unemployment in the county was above 6 percent and had been well above the national average rate for a 3-year period. As a result, Smyth County was notified that it was statistically qualified for assistance from the Economic Development Administration.

Local leaders responded quickly, and within 3 months the county produced an Overall Economic Development Program (OEDP) acceptable to EDA. In October, the Marion Chamber of Commerce established the Smyth County Industrial Foundation to promote industrial expansion.

The county's OEDP pointed to an urgent need for expanded water facilities to make industrial growth possible. Previous

attempts to attract manufacturing plants had foundered on the lack of water, local officials noted.

In May 1967, EDA approved a $522,500 grant to the town of Marion to expand its water system to serve an industrial area. The funds, matched by the community, helped build a 12-inch main to serve industry, a water-treatment plant, and two 1-million-gallon storage tanks.

The water main enabled Marion to develop a 69-acre industrial park. Mouldings, Inc., established in the park a plant that employs 600 persons in the production of wood moldings for homes, portable homes, and office buildings. The firm imprints wood grains on the moldings.

In addition, Empire Manufacturing Company has established in the area a plant that produces raw materials for Mouldings, Inc. Empire employs 100 persons.

Town Manager Roy S. Helms notes that for several years before the new water system was completed Marion had found it necessary to restrict the use of water. Now Marion will be able to provide water to serve the community of Atkins 5 miles to the east.

"Without the EDA grant, we could not have undertaken the project," Helms adds.

In October 1968, EDA approved a $395,000 grant to enable the town of Chilhowie, 3 miles west of Marion, to enlarge its water and sewer systems to serve expanding industry. The town's citizens voted overwhelmingly to match the EDA grant in an election that Mayor Sam Mountain called "the biggest step toward progress Chilhowie has ever taken."

As a result of this project, the Vance Fertilizer Company has reported it will expand and add 20 workers.

The growth in industrial employment in the county has brought about a dramatic improvement in the unemployment statistics. The Department of Labor reports that Smyth County's unemployment rate was down to 4.5 percent for 1968 and to 3.1 percent in 1969.

Tate Buchanan, chairman of the Smyth County Development and Planning Council, credits EDA's assistance with making the county's comeback possible. He says: "The biggest single factor which has helped Smyth County's economy in the shortrun, and most definitely in the longrun, is Economic Development Administration projects."

Though the picture has improved, there remain many unemployed and underemployed persons in the area, and Smyth County leaders are actively pursuing efforts to sustain their rate of growth.

They also are working to improve cultural and social opportunities for the county's underprivileged residents. Two Head Start projects are in operation. Day care for children of working mothers is being provided through the Mountain Community Action Program.

Long-range plans call for improvement of the Mountain Empire Airport at Marion, expansion of recreation facilities, and establishment of a regional vocational-technical school to offer training opportunities for school dropouts.

Recognizing that it shares economic problems with other communities in its area, Smyth has joined five other counties and the independent cities of Galax and Bristol, Virginia, to form the Mount Rogers Regional Planning Commission. The Commission receives funds for administrative costs from the Appalachian Regional Commission.

Thus, the people of mountainous Smyth County are making use of their own resources and of all available Federal programs to scale the peaks of economic growth and insure a better way of life for citizens previously denied opportunity.

CHAPTER SIX

Business Loans: Developing Jobs With Sound Industries

DURING FISCAL 1970, EDA continued to seek the maximum impact for each business loan dollar by increasing its support of medium-sized and large manufacturing companies.

EDA has found that established companies with experienced management and a record of success are most effective in bolstering the economies of lagging communities.

Approximately 72 percent of EDA's business loan funds was invested to help existing companies expand or establish new plants. The remaining 28 percent was invested in new ventures.

In fiscal 1969, about 75 percent was approved for established firms and 25 percent for new businesses.

A total of $49,360,000 was approved for 40 loans in fiscal 1970. In addition, EDA approved working capital guarantees for loans totaling $1,380,000. These working

capital loans were made by private institutions for EDA-supported projects.

EDA business loan activity for fiscal 1970 should result in the creation of more than 8,000 permanent, full-time jobs, according to reports supplied by loan recipients.

The 40 loans averaged $1,250,000, and the average number of anticipated jobs per loan is about 200. This represents an EDA investment of approximately $6,000 per job for loans originated in fiscal year 1970.

Total cost of the 40 projects supported by EDA loans was $109,230,000. Other lenders, including local development companies, provided $45,072,000. Firms participating in the program invested $14,798,000 in equity to complete the financing.

Business loans may be used for land acquisition and development, the purchase or construction of buildings, and the purchase and installation of machinery and equipment.

EDA Loans Help Create Industrial Jobs

INDUSTRIAL EXPANSION . . . financed in part by the Economic Development Administration . . . is building a new future for residents of communities where jobs are too few, incomes too low, and local investment capital is inadequate.

Examples of what can be accomplished with the support of EDA's business loan program:

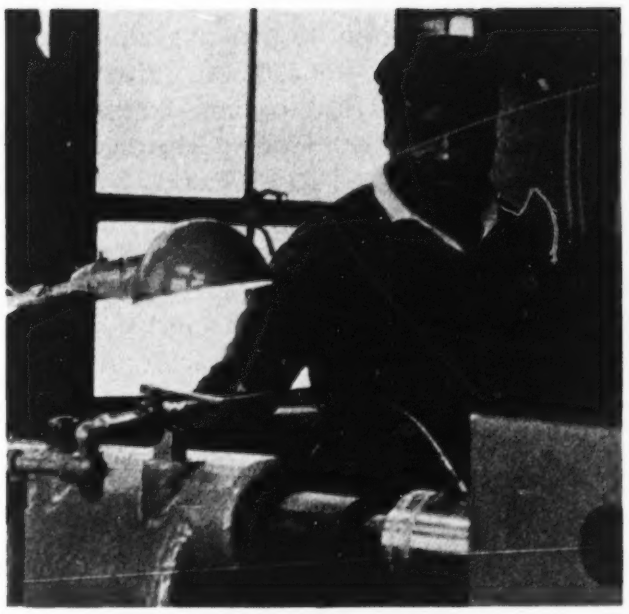
• Approximately 1,200 Indians are working at the Fairchild Semiconductor plant on the Navajo Reservation in New Mexico, where electronic components are assembled for the Fairchild Camera and Instrument Corporation.

The electronics plant, leased to Fairchild by the tribe, is located in an industrial park at Shiprock.

Fairchild first started operations on the reservation in 1965 in a community center building. The pilot project got under way with 50 employees.

The tribe constructed the new Fairchild facility with the help of a $678,500 business loan from EDA. The Navajos provided $365,300 to complete the construction cost of $1,043,800.

The industrial park was developed with $153,000 in EDA public works funds. Development included the installation of water and sewer lines.



• In January 1969, EDA approved a $5.85-million business loan and a $5.4-million working capital guarantee to help the Seatrain Shipbuilding Corporation reestablish shipbuilding operations in the former Brooklyn Navy Yard.

Seatrain is now in operation at the yard. The facilities will be used to construct two 230,000-ton tankers. They will be twice the size of the largest tanker in the U.S. merchant fleet—the S.S. Manhattan, also a Seatrain vessel and the first to navigate the Northwest Passage to Alaska.

Construction of the two tankers will provide more than 5,500 man-years of employment at the shipyard, with an equal number of man-years of employment to be generated among supporting suppliers.

• The Linerboard Corporation of America is constructing a container plant in Newark, New Jersey, that will have a work force of about 240 when it is in full production.

Linerboard plans to recruit about 70 percent of the plant's workers through the city's Job Skill Center and apprentice-training programs for hard-core unemployed.

The project cost of $2.3 million is being paid for in part with a $1.5-million EDA loan.

• The Great Northern Plywood Corporation employs about 220 persons at its Cedar Springs, Georgia, plant.

EDA provided a loan of $2.8 million to help construct the $4.25-million facility, which has been in operation since 1968 and produces sheathing plywood.

• In May 1970, EDA approved a $6-million business loan and a $3.4-million public works grant to help create more than 1,000 industrial jobs at Gulfport, Mississippi, and rebuild an area devastated by Hurricane Camille in August 1969.

The loan will be used to help establish an industrial plant to manufacture heavy marine equipment in the Bernard Bayou Industrial District. The facility will be built by the Harrison County Development Commission and operated by the Paceco Division of the Fruehauf Corporation.

Paceco anticipates a work force of about 725 persons when the plant is in full production.

The public works grant will enable Harrison County to develop the Bernard Bayou Industrial District. Site preparation will include installation of water and sewer lines, channel clearance, and construction of rail facilities, streets, and an industrial dock. Development of the industrial district will cost approximately $5.7 million.

Harrison County officials report that one result will be the expansion program of the National Tank Company, a manufacturer of oil and gas processing equipment. The company plans to expand its Gulfport facility and enlarge its work force by 290.

CHAPTER SEVEN

Technical Assistance: Flexibility Is the Key

FLEXIBILITY is probably the single word that best describes EDA's technical assistance program.

During fiscal 1970, EDA approved 179 new technical assistance projects. A total of 111 other projects were continued with the support of EDA grants. Total technical assistance funds approved for the fiscal year were $12,398,000.

EDA provides this type of support for a wide variety of projects designed to meet two basic needs:

- To enable a community to find solutions to problems that retard industrial growth and the generation of new jobs.
- To help pay for the expertise needed to plan, implement, and coordinate local development programs.

The agency has steadily increased its commitment to "institutional support" by (1) providing administrative and related funds for local public and private nonprofit organizations active in economic development and (2) making similar grants to national organizations that have chapters in operation at local levels.

Other important forms of EDA technical assistance include:

- The feasibility study, which is funded by EDA and performed by professional consultants. A typical study might deal with the potential location and development of an industrial park, or the use of an area's resources, or new product development, or the best way to put abandoned industrial facilities to productive use again.
- Business development center programs at selected universities. These centers provide technical and management counseling for businesses and small manufacturing firms in operation in distressed areas of the Nation.
- The manpower training program, which involves working with the Department of Labor and the Department of Health, Education, and Welfare in administering training funds in areas eligible for EDA assistance.

EDA technical assistance falls into four general categories:

1. *Industrial and Resources Projects.* Most feasibility studies and university center programs are in this category, as well as rural-oriented institutional projects such as those dealing with Indian reservations and rural cooperatives.

2. *Urban Projects.* During fiscal year 1970, $6.1 million was approved for urban technical assistance projects. This assistance was directed toward the solution of the problems of underemployment and unemployment in the Nation's cities.

Support was provided to a variety of organizations for a broad range of economic development activities that include minority business development and management assistance; business cooperatives and youth-oriented economic development projects; special studies for business feasibility, transportation, and economic evaluation projects; and local public agency economic development planning and implementation.

3. *Manpower Training.* Under Section 241 of the Manpower Development and Training Act, $22 million is reserved annually for training the hard-core unemployed in EDA-designated areas. During fiscal 1970, approximately 11,800 persons received vocational training with Section 241 assistance. EDA also works with employers in identifying manpower needs. Although recipients of EDA business loans automatically are notified of the agency's counseling service, this assistance is available to all companies in designated areas.

4. *Management and Operational Assistance.* Under this program, EDA furnishes counseling and information needed to strengthen businesses in EDA-designated areas. Close attention is paid to recipients of EDA business loans. The average management and operations project costs $10,000 and lasts 3 months.

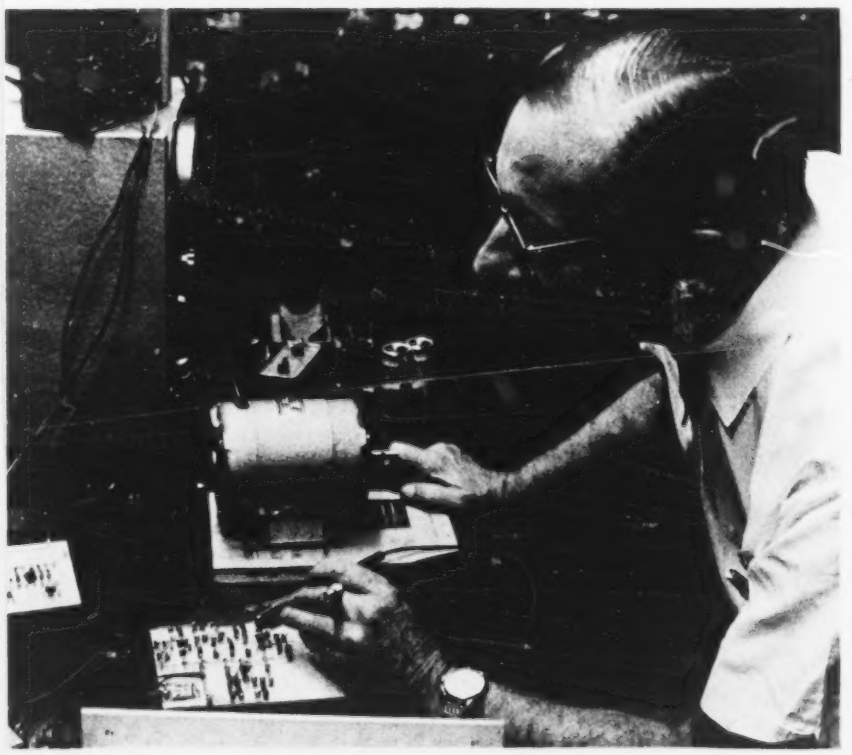
Jobs Are a Product of Inventors Laboratory

A FIVE-YEAR PILOT PROJECT in Philadelphia has helped link the world of technology with the world of business to create jobs in budding growth industries in southeastern Pennsylvania.

The link was the Southeastern Pennsylvania Regional Development Laboratory, which began operations in 1965 to help inventors and researchers develop and market products and services that would result in the establishment of new science-based companies.

First of its kind, the laboratory was located at 4040 Locust Street in the University City area of West Philadelphia.

The laboratory estimated in a report that it will have helped create at least 300 jobs by 1971.



Its operation was made possible by financial assistance from the Federal Government, the Commonwealth of Pennsylvania, and three local sponsors.

EDA supplied $165,950 in technical assistance funds, and its predecessor agency —the Area Redevelopment Administration— $120,750. Local sponsors were the Southeastern Pennsylvania Economic Development Corporation, the West Philadelphia Corporation, and the University City Science Center.

The basic mission of the laboratory was to seek out the creative individual who believed he had come up with a fresh idea for a service or product that would provide the basis for a sound business venture.

An applicant with promise would be designated as a "research associate," and he would enter into a service contract with the laboratory. The fee would vary, depending on the facilities and services furnished by the laboratory. Patent rights would be retained by the research associate.

About 550 ideas were submitted to the laboratory for consideration. About 30 of these ideas were judged to have substantial technological and commercial potential. Seventeen have proved sound ventures.

Some of the materials and services the laboratory supplied to its associates were private work areas, tools and equipment, technical assistance, secretarial service, consultation with professionals active in many fields, and business contacts.

The laboratory also provided assistance to small companies, some of which ultimately became research associates. The needs of these firms were similar to those of individual inventors and researchers, but greater emphasis was placed on meeting business-related demands.

Also available was a "commuter research" program for individuals not requiring the full services of the laboratory.

In addition to adequate working space, the most critical need of the research associates was consultation services. A majority of the laboratory's associates were knowledgeable in the technical field, but needed advice on patenting, marketing, financing, and accounting.

Although the operation of the laboratory was focused primarily on the work of the research associates, community training and information programs also were offered.

This type of assistance included:

- A 6-month junior workshop for area Negro youths. The workshop provided skill training in electricity, woodworking, and sheet-metal work.
- One-day workshops to provide new and prospective businessmen with advice on marketing, production, and the financing of new services and products.
- Publication of booklets on patenting, disclosure, and the licensing of inventions.

A few of the ideas developed in the laboratory and put to commercial use by research associates involve:

- Advanced medical and dental adhesive compounds.
- A fuel-management computer for use on multi-engine private aircraft.
- A portable device for washing aluminum truck trailers.
- A large-volume, high-speed keypunch service.

By taking the inventor out of his kitchen or garage, and by giving him good working quarters and the necessary materials and technical assistance, the development laboratory has demonstrated the role of technology in economic growth.

TABLE 6. OBLIGATED TECHNICAL ASSISTANCE PROJECTS By Type of Project

	Fiscal Year 1970		Cumulative fiscal years 1966 through 1970

CHAPTER EIGHT

EDA Research Looks To National Growth Policy

A TOTAL OF $2.3 million was approved in fiscal 1970 for research projects, program evaluation, data development, support of universities active in regional development research, and a broad range of studies and projects involving such topics as industrial location, migration, and commuting.

During the year, the results of several of EDA's larger research grants formed the basis for the EDA Conference on National Growth Policy.

This conference, held in April 1970 and attended by representatives of the White House and Federal agencies, featured four topics: (1) urban relationships and regional growth, (2) growth center strategy, (3) national priorities for regional development, and (4) the question of city size and national policy.

Under research grants from EDA, studies on these topics had been conducted by nationally recognized authorities at the University of Chicago, the University of Texas, Harvard University, and the University of California at Berkeley.

Training and education programs continued under grants to the Southern Regional Education Board and the Western Interstate Commission for Higher Education. These grants provide undergraduates in the Southeast and the West with practical experience in dealing with local development and planning problems through specific on-the-job work projects.

These programs have also increased the number of practitioners in the field. An increasing share of the costs of these programs is being absorbed by State governments and other non-Federal institutions.

During fiscal 1970, the research program continued to make substantial additions to the information base used by the operating offices of EDA, as well as by other economic development agencies. Personal income estimates for each county have been provided for each year through 1968, and work on estimates for 1969 is under way.

A survey of primary factors influencing industrial-location decisions is also under way, accompanied by a collection of data on community resources. The result will be a system that will help match appropriate industries with areas possessing the required resources.

The multi-regional input-output research program at Harvard University has produced a detailed state-by-state report for the years 1947, 1958, and 1963, showing employment and annual payrolls by industrial sector, and output by sector. This is part of a larger project that analyzes the economic interdependence among industries and regions in the United States. Among other reports received under this project are "Shifts in the Regional and Industrial Impact of Federal Government Spending" and "Empirical Implementation of a Multi-Regional Input-Output Gravity Model."

In conjunction with this work, EDA also supported the second full-scale study by the Office of Business Economics on the input-output structure of the United States economy in 1963. Estimates were prepared for about 370 separate industries, and the results were made available to users in the November 1969 issue of the Survey of Current Business.

In the field of regional development, the University of Chicago's Center for Urban Studies completed a case study of the impact of technology on social change. The study deals with the economic, social, and political effects expected to result from the selection of the village of Weston, Illinois, as the site for the Atomic Energy Commission's $250-million nuclear accelerator.

Other regional studies completed include an analysis of employment and incomes in the Coastal Plains section of North Carolina, South Carolina, and Georgia.

Conducted at the University of Georgia, the study (1) pinpoints the gap between incomes in the Coastal Plains Region and in the Nation as a whole, (2) tells why this difference exists, and (3) projects the size of the gap by 1975. The projection is based on the assumption that trends of recent years will continue unchanged.

Program evaluation studies were performed to provide samplings of specific projects receiving EDA public works funds, business loans, and technical assistance funds. These studies were based on methods that had been developed the previous year.

Two issues of The Research Review, containing descriptions of projects and their results, were published.

CHAPTER NINE

Support for Multi-State Regional Development

SEVERAL PARTS of the Nation are faced with common economic problems that extend well beyond State boundaries and require regional answers.

To help meet this need, five multi-State economic development regions were established under Title V of the Public Works and Economic Development Act.

Federal-State partnerships in the form of regional action planning commissions represent these multi-State areas.

Commission members are a Federal co-chairman, appointed by the President, and the Governors of the States in the region. One Governor serves as State co-chairman.

The basic goal of each commission is to bolster the economy of a region through comprehensive, long-range planning and the coordination of available resources on the local, State, and Federal levels.

The five regions encompass 571 counties in 20 States. They are:

1. Coastal Plains: 159 counties in Georgia, North Carolina, and South Carolina.

2. Four Corners: 92 counties in Arizona, Colorado, New Mexico, and Utah.

3. New England: All of Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont. There are 67 counties in these six States.

4. Ozarks: 134 counties in Arkansas, Kansas, Missouri, and Oklahoma.

5. Upper Great Lakes: 119 counties in Michigan, Minnesota, and Wisconsin.

During fiscal 1970, EDA continued to provide support for commission activities. Congress appropriated a total of $23 million to enable the commissions to furnish grants for projects within the regions.

The commissions received $4,752,000 in planning and technical assistance funds from the Department of Commerce during the fiscal year. In addition, EDA conducted a $376,000 research program to help advance regional planning activities.

Multi-State Development Regions

CHAPTER TEN

Minorities Advance With EDA Programs

A MAN CANNOT enter the mainstream of American life until he is able to enter the mainstream of the American economy—either as a businessman or a jobholder earning good wages.

• Minority Americans make up 17 percent of the population, own less than 3 percent of all businesses, and hold less than one-half of 1 percent of capital assets.

• Minority Americans historically have been caught in a vise of high unemployment and low personal incomes.

To help break this grip and establish the conditions that create business and job opportunities, EDA supported a wide variety of minority-based projects during fiscal 1970.

These projects involved blacks, Indians, Mexican-Americans, Puerto Ricans, and Alaskan natives.

EDA approved $6.8 million for 112 technical assistance projects to stimulate all phases of minority economic development.

The agency has provided support for:

1. National nonprofit organizations active in minority business development (Examples: the Urban League, the Black Economic Union, the Zion Non-Profit Charitable Trust, the National Business League, and the Interracial Council for Business Opportunity).

2. Local nonprofit groups with similar goals (the Economic Resources Corporation of Watts, the Business and Job Development Corporation of Pittsburgh, the Dallas Alliance for Minority Enterprise, the Job Loan and Urban Venture Corporation of Philadelphia, the Cincinnati Business Assistance Guarantee Fund, the Ebony Businessman's League of Hartford, the Urban Indian Development Association of Los Angeles, the Puerto Rico Forum of New York City, Plan of Action for Challenging Times of San Francisco, the South East Alabama Self-Help Association, the Indian Development District of Arizona, the East Bay Spanish-Speaking Citizens Foundation of Oakland, and the Freedom Foundation of Boston).

3. Minority-based financial organizations supplying management-training services to member banks and savings institutions so they can play a larger role in the development of the inner cities (National Bankers Association and the American Savings and Loan League).

4. Municipal planning agencies active in inner-city development (Baltimore, Chicago, Houston, Boston, Cleveland, and Washington).

5. City-operated job programs reaching disadvantaged youths (Akron, San Diego, Omaha, Houston, Seattle, San Francisco, Oakland, and San Juan).

6. Associations of minority contractors to enable them (a) to upgrade management techniques; (b) to gain additional support from the public and private sectors; and (c) to increase the ability of member firms to bid successfully on larger projects (Boston, Chicago, Cleveland, Los Angeles, New York, Oakland, and Washington).

7. Vocational training and counseling programs (Opportunities Industrialization Centers in Chicago; Providence, Rhode Island; Montgomery, Alabama; Jackson, Mississippi; and San Jose, California).

8. Business development centers at universities that provide management counseling and technical assistance for new and expanding firms in distressed areas (Southern University, Baton Rouge; Howard University, Washington; and Atlanta University).

During fiscal 1970, EDA also approved $5.6 million in business loans to help establish or expand companies either minority-controlled (blacks, Indians, and Puerto Ricans) or located on reservations.

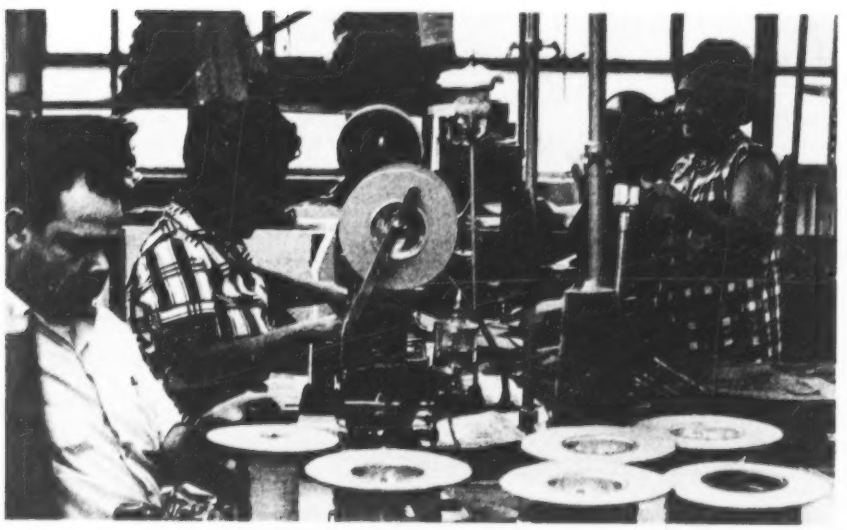
Among these was a $406,000 loan to help establish a Chicago-based Negro manufacturing corporation, which has financial support from three national firms and technical aid from several local companies.

The EDA loan was made to enable the U.S. Manufacturing & Development Corporation to establish a corrugated-box plant in the former stockyards area of Chicago. The facility is expected to generate about 90 jobs. The total project cost—excluding working capital needs—is $625,000. Blacks hold 88 percent of the voting common stock.

The International Harvester Company, Sears, Roebuck and Company, and Standard Oil Company of Indiana agreed to purchase a total of $470,000 in preferred stock.

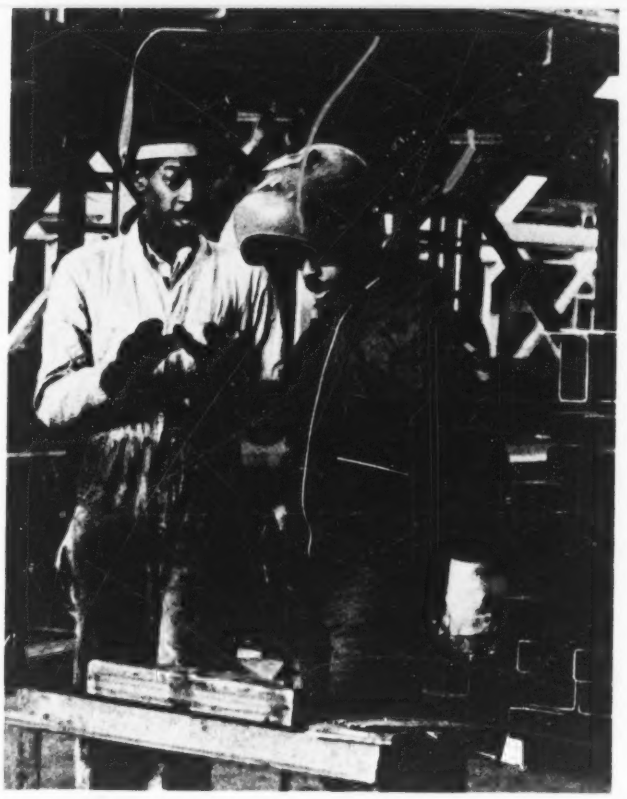
This venture is particularly significant because it demonstrates what can be accomplished when minority initiative is combined with the resources and concern of private industry and the Federal Government.

Although EDA business loans generally are approved for large projects that can create many jobs, the growth of bigger



business sets the stage for the successful development of smaller, supporting businesses of all types.

This same process of total economic development of a community or part of a city is enhanced by EDA's public works program.



The support of public works projects has played a major role in the development of minority areas where unemployment is unusually high.

In Chicago's old stockyards area, for example, the agency had invested a total of $18.3 million by the end of fiscal 1970. Of this amount, about $11.3 million in public works funds had been approved to enable the city to (1) develop the yards for new industry and business by constructing access roads and installing water and sewer facilities and lighting, and (2) build a skill-training center to train 1,000 inner-city residents annually for specific jobs generated in the yards area.

When the major meatpackers closed down operations in the stockyards over a period of several years, they took with them more than 35,000 jobs. Of the jobs lost, at least 70 percent had been held by blacks living east and south of the stockyards, the city of Chicago reports.

EDA's public works program is also playing a key role in the development of large industrial complexes in the old Brooklyn Navy Yard and the Watts area of Los Angeles. Both are low-income areas populated primarily by nonwhites.

Both are being developed to serve the needs of (1) large and small industries and commercial firms, and (2) the residents of these communities.

CHAPTER ELEVEN

Indians Use EDA Tools To Build Economy

DURING FISCAL 1970, EDA and the Office of Economic Opportunity selected five additional reservations for designation as members of a Federal action program to enable progressive tribes to plan and implement economic and social growth.

This brought to 21 the number of "action" reservations participating in the Selected Indian Reservation Program (SIRP), which is based on tribal self-determination and coordinated Federal support. EDA and OEO are joint sponsors of the program. EDA and OEO designated the original 16 action reservations in September 1967.

The new members are the Fort Apache and Colorado River Reservations in Arizona; the Fort Yuma Reservation, California; the Fort Peck Reservation, Montana; and the Uintah and Ouray Reservation, Utah.

They qualified for the SIRP Action List because of (a) their potential for substantial economic and social development and (b) the progress they have made in planning for growth and working effectively with the public and private sectors to implement that planning.

About 50 percent of EDA's Indian project funds are allocated for use on the "action" reservations.

The Selected Indian Reservation Program is based on the following principles: (1) Federal support must be responsive to the needs and plans of the reservations; (2) Funds for specific projects are based on the development program prepared by each reservation; (3) SIRP not only gives the Indian control of reservation activities, but helps EDA and other agencies to obtain greatest mileage out of funds they provide.

Another aspect of the Selected Indian Reservation Program involves a "planning" group of reservations. This second group is working to develop the internal capacity needed to prepare long-range development programs.

Effective July 1, 1970, four additional reservations and the Inter-Tribal Council of California were designated as members of the Planning List. The new reservations are the Seneca, New York; Cherokee, North Carolina; Southern Ute, Colorado; and Yakima, Washington. The Planning List includes 44 reservations and the Inter-Tribal Council of California.

Reservations included in SIRP Action and Planning Lists represent about 65 percent of all Indians on Federal reservations.

During fiscal 1970, EDA approved $14,709,651 in public works funds, $3,491,500 in business loans, $745,110 in technical assistance, and $507,102 in planning grants for Indian projects.

The total amount approved was $19,453,363. This included $10,979,642 for

"action" reservations and $3,398,283 for "planning" reservations.

EDA programs that provide funds for reservation projects are coordinated by the agency's Indian Desk, which also works with the tribes, other Federal agencies, State Indian commissions, and private enterprise.

In furtherance of its decentralization program, EDA has named Indian project officers as special assistants to the directors of the Southwestern, Western, and Midwestern Regional Offices—thus assuring more effective responsiveness in the field.

The agency also helps sponsor or conduct training conferences, industrial development shows, planning seminars, and other activities dealing with reservation development.

Tribes Look to Future in Business

THE AVERAGE LIFESPAN of an American Indian living on a reservation is 46 years. His family has an annual income of less than $2,000.

He is part of an Indian work force that numbers about 130,000 across the country. Almost 40 percent of this labor pool is unemployed. And about one third of those who are working are underemployed because their jobs are seasonal or temporary.

The Indian has been called the lost American. Some cynics have labeled him the last American.

But his image has been undergoing a transformation in recent years—partly because industry has discovered that many reservations are fertile ground for expansion programs and partly because the Federal Government has made available a wide range of programs designed to promote economic and social growth in Indian communities.

However, the emergence of the new Indian is primarily a self-styled movement resulting from progressive reservation programs based on tribal concern for the future.

On reservation after reservation, tribes are increasing their commitment to chart their own futures by viewing change as an ally rather than as something to avoid.

The Indian's needs are many and varied. One of them is economic strength. It is in this area that EDA is working with tribes throughout the Nation to help them realize their goals.

EDA's efforts are cited by Vine Deloria, Jr., a Standing Rock Sioux and former Executive Director of the National Congress of American Indians, in his recent book, "Custer Died for Your Sins." "Under . . . the Economic Development Administration," Deloria wrote, "tribes have been able to enjoy a great variety of projects. It would be fair to say that of any agency in the government in the last few years EDA has been the most responsive to tribal programs."

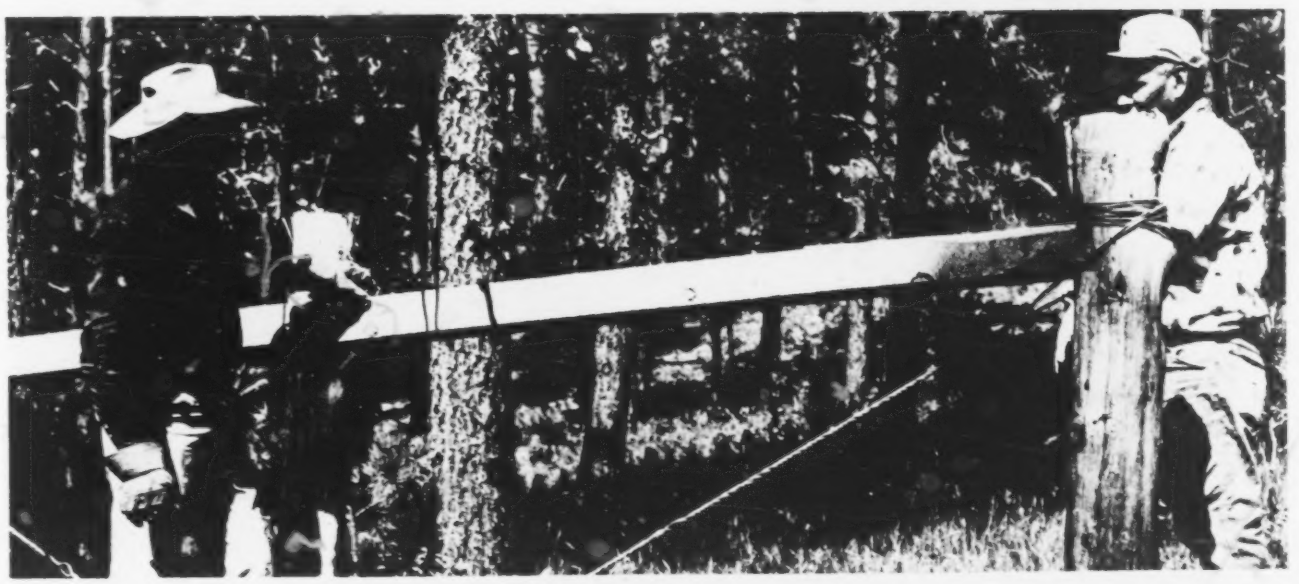
To many people, economic development simply means large-scale industrial growth. Often lost, however, in the wake of news that industries have begun to establish

large plants on a growing number of reservations, is another sign of change—the growth of Indian businesses of all sizes and types.

The director of a business development program funded by EDA serving 17 reservations in Arizona says this type of growth is vital to reservation progress.

Robert J. Slinkard, program director, states:

"Indian-owned and managed commercial enterprises and small enterprises would enable Indians to provide services and commodities to each other, generate profits into family economies from their own initiative, and provide job opportunities for their neighbors. . . . Small businesses in the community would spread the meager purchasing power of all the residents by providing nearby goods and services that Indians now travel many miles to obtain."



In a report on the program, Slinkard points out that size is not a valid economic indicator. If a business is meeting its objectives and if it is owned by an Indian employing other Indians, then its impact is substantial.

Giving an example, he says, "Giant and costly non-Indian owned supermarkets are not required in areas where a small Indian grocery store would meet the needs of the community."

The 17-reservation business development program Slinkard directs has been

functioning with technical assistance funds from the Economic Development Administration.

With Indians staffing all of the field slots, the program has been instrumental in getting nine small businesses in operation on reservations. This has been accomplished by helping to secure loans and providing management and technical assistance.

Now in operation are an armature-rewinding shop, a service station, a barber shop, a grocery store, an arts and crafts shop, a cafe, a recreation hall, a seamstress shop, and a canvas products shop.

In addition, about 60 potential business opportunities have been identified. These include automotive repair, contract hauling, a laundry, a trailer court, riding stables, landscaping, hog raising, and a brickyard.

Other forms of support from EDA are enabling reservations throughout the Nation to establish and operate tribal enterprises. Some examples follow.

RED LAKE RESERVATION, MINNESOTA

The Red Lake Chippewa Tribe owns and operates a sawmill which employs about 55 Indians. The mill produces 5 million board feet of lumber annually. Logging generates at least another 50 jobs in support of the mill and planing operation.

The mill was constructed with the aid of a $200,000 business loan approved by EDA in June 1966. The tribe provided $280,000 to complete the project cost.

The facility replaces a tribal sawmill destroyed by fire in December 1965.

Other businesses operated by the tribe are a fence plant, which uses white cedar, and a commercial fishery, which nets more than 1 million pounds a year. Walleyes are the main catch, and with conservation in mind, the tribe imposes a limit of 650,000 pounds per year on this species.

ALABAMA-COUSHATTA RESERVATION, TEXAS

The Alabama and Coushatta Tribes have been operating a successful Indian village and tourism complex funded by EDA on their reservation since 1965.

Attendance has grown steadily and has reached the point where facilities must be expanded before more visitors can be accommodated.

About 125,000 persons visit the Alabama-Coushatta complex annually. The tribes are implementing an expansion program to construct a dam, a 30-acre lake, campsites, and trailer and picnic areas. EDA and the State of Texas are each providing $209,000.

The existing tourism facilities provide between 120 and 140 part-time and seasonal jobs. Although the Indian village is open on weekends during the winter, new attractions will enable the tribes to convert their business into a year-round operation and generate permanent jobs.

ANNETTE ISLAND, ALASKA

Salmon fishing is a mainstay for Annette Island. But it produces a severe unemployment problem.

During the fishing season, the Annette Island Canning Company—a tribal enterprise at the community of Metlakatla—is in full operation from July to September. At this time of year more than 150 Indians are employed.

Tribal members also operate 28 seine-type fishing vessels which employ about 170 crew members during the season.

In May 1966, EDA approved $585,000 in public works funds to help build a cold-storage facility and processing plant at Metlakatla. The facilities will enable the Indian community to diversify its catch and extend the season to 9 months of the year.

Metlakatla has a population of about 1,100, and Indians own and operate a wide range of retail businesses and services.

LUMMI RESERVATION, WASHINGTON

With the aid of $1.8 million in public works and technical assistance funds from EDA in cooperation with OEO, the Lummi Tribe is carrying out an aquaculture program that promises to result in several profitable businesses.

The sea-farming of Lummi Bay is expected to produce the following results:

• Within 5 years, the production, harvesting, and marketing of oysters and fish can evolve into a $4-million industry employing 600 persons.

• The tribe will be able to sell oyster larvae on both the domestic and overseas markets. The Lummis have established the first commercial oyster hatchery on the West Coast and hatched more than 100 million oyster larvae.

• The commercial harvesting of red algae ("red seaweed") will be profitable. This type of algae is being harvested in only three other parts of the world, none of them on the North American Continent. The red seaweed is used as an emulsifier in foods, drugs, and cosmetics.

The Lummis are involved in training and education programs to fill the technical and business management needs of their project.

NAVAJO RESERVATION, ARIZONA, NEW MEXICO, AND UTAH

The most prominent tribal enterprise on the huge Navajo Reservation is Navajo Forest Products Industries (NFPI).

Established in 1958, NFPI employs more than 500 persons, nearly all of them Navajos.

The company has a $6.5-million sawmill of all-steel construction, one of the most modern in the industry.

NFPI harvests selectively to insure that cutover areas are reseeded. About 40 million board feet of lumber are cut annually. Most of the crop is prime ponderosa pine. The reservation encompasses about 700,000 acres of forest.

In June 1966, EDA approved a $475,000 business loan to enable NFPI to expand and construct a millwork and cut-stock plant. Total cost of construction was about $850,000. The funding was completed by NFPI and a bank.

The new plant began operations in 1968 and produces items for the home-building industry and specialty products for the manufacture of furniture and toys.

MESCALERO RESERVATION, NEW MEXICO

Cattle production is a major source of income for the Mescalero Apaches. More than 40 percent of the tribal members own stock in the reservation's cattle-raising cooperative.

The herd numbers about 6,000 Herefords. EDA approved a $144,000 grant to help the tribe construct 100 miles of fencing. This will enable the Mescalero Apaches to make better use of water and grazing land.

Cattle production yields an annual gross income of about $360,000.

In addition, a retail center is being constructed in part with a $108,000 business

loan from EDA. The new tribal facilities will include a general store and a service station and will be located at the community of Mescalero in a tribal commercial park.

"Our destiny is in our hands and nobody else's." This belief is basic to the development program under way on the Mescalero Reservation. Perhaps it best sums up the new patterns of growth cropping up in Indian communities across the Nation—and business is an essential part of that growth.

Development Activities by State

EDA approved projects—as of June 30, 1970
